DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 17-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Hirota et al.

Hirota et al. (US 5,189,876) discloses an exhaust gas purification system. The system comprises (with reference to Figure 2) a lean burn diesel engine (1), a catalytic reactor having an inlet end (14), a catalytic converter (3), an outlet end (downstream of 3), and a port (11) having a fuel injector (6). Refer also to column 3, lines 5-55.

As each and every element of the claimed invention is taught in the prior art as recited above, the claims are anticipated by Hirota et al.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1725

4. Claims 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hirota et al. as applied above for claims 17-19 and further in view of Lauder or Volin.

The teachings of Hirota et al. are applied as described above for claims 17-19.

The difference between the reference and the claims is that the reference does not disclose the particular catalyst required by claims 20-21.

Lauder (US 4,049,583) discloses a catalyst composition useful in the oxidation-reduction purification of exhaust gases from internal combustion engines (column 1, lines 15-22). The catalyst composition comprises a perovskite having the formula:

$$[A^{1}_{1-x}A^{2}][B'_{1-y}Me_{y}]O_{3}$$

wherein A1 and A2 are each one or more metals having ionic radii between about 0.8 and 1.65 angstroms, B' is one or more platinum group metals, Me is one or more of the platinum metals ruthenium, osmium, rhodium, iridium, palladium, and platinum, x is between 0.05 and 0.95 and y is between 0.01 and 0.20 (column 4, lines 15-40). Suitable type A metals include rare earth metals such as lanthanum and suitable B' metals include transition metals such as manganese (columns 5-6). It is taught that the composition may form a coating on a suitable support substrate (column 12, lines 35-50). The catalyst is taught as suitable for use in a catalytic converter in an internal combustion engine which runs on gasoline fuel (columns 13-15).

Volin (US 4,134,852) discloses a catalyst composition useful in auto exhaust purification (column 1, line 60). The catalyst composition comprises a perovskite of formula ABO₃ (column 5, lines 20-50). An example of a suitable composition is $Sr_{0.2}La_{0.8}Mn_{0.9}Ru_{0.1}O_3$ (column 6, Table 1), which meets the perovskite composition

Art Unit: 1725

claimed. The reference teaches that the composition may be coated on a substrate (column 11, lines 5-17). Volin teaches that the catalyst composition may be employed in a catalytic converter of an internal combustion engine as a three way catalyst (column 5, lines 55-65 and column 11, Example II).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the system taught by Hirota et al. to include the catalyst compositions taught by either Lauder or Volin. One of ordinary skill would have been motivated to do so, with a reasonable expectation of success, in light of the teachings by the secondary references that the catalyst compositions accomplished the function desired by the primary reference, i.e. the purification of nitrogen oxides from internal combustion engines.

Response to Arguments

5. Applicant's arguments with respect to claims 17-21 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christina Johnson whose telephone number is (571) 272-1176. The examiner can normally be reached on Monday-Friday, 7:30-5, with Alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on (571) 272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
